Requirement ID	5
Title	[DEMO] Verified owned-ticket access
Requirement Type	Functional
User Priority	High
Suggested Priority	High
Quality Risk Score	Not assessed
Risk Level	Medium

Analysis provenance

AI analysis (v4)

Uncertainty around the exact error response format and interface mechanisms could lead to integration discrepancies and potential authorization bypass vulnerabilities if not rigorously defined.

The priority is marked as High based on the input data, but because no business rationale is supplied, the justification for this priority level needs stakeholder confirmation.

Original Requirement

An authenticated customer can view the subject and description of a support ticket they own. Requests for another customer ticket return access denied without ticket content.

Ambiguity Findings

[AI Suggestion] [Needs Confirmation] The requirement does not specify the interface or mechanism through which a customer views a support ticket subject and description.

[AI Suggestion] [Needs Confirmation] The requirement does not define the exact format or error code for the access denied response.

Conflicting Statements

None recorded.

Missing Information

[AI Suggestion] [Needs Confirmation] Unspecified mechanism for viewing tickets.

[AI Suggestion] [Needs Confirmation] Unspecified definition of the access denied response format.

Clarification Questions

[AI Suggestion] [Needs Confirmation] What specific interface or endpoint is used by an authenticated customer to view a support ticket?

[AI Suggestion] [Needs Confirmation] What is the exact error code, message format, or response structure when access is denied?

Testability Findings

[AI Suggestion] [Needs Confirmation] Lack of specification regarding the access denied response format makes automated assertion on error responses dependent on unstated assumptions.

Assumptions

None recorded.

Improved Requirement

[AI Suggestion] [Needs Confirmation] An authenticated customer can view the subject and description of a support ticket they own. Requests for another customer ticket return access denied without ticket content.

Acceptance Criteria

[AI Suggestion] [Needs Confirmation] AC-001: An authenticated customer requesting to view a support ticket they own must receive the subject and description of that ticket.

[AI Suggestion] [Needs Confirmation] AC-002: An authenticated customer requesting to view a support ticket owned by another customer must receive an access denied response without any ticket content.

Generated Test Scenarios

[AI Suggestion] [Needs Confirmation] SC-a28d3ff8b01a4a2e8bc55b20c2d61648-001 | Positive: Customer views owned support ticket | Requirement version 2

Linked criteria: AC-001

Preconditions

The user is an authenticated customer.

A support ticket exists and is owned by the authenticated customer.

Test Steps

The authenticated customer requests to view their owned support ticket.

Expected Result

The system returns the subject and description of the requested support ticket.

[AI Suggestion] [Needs Confirmation] SC-a28d3ff8b01a4a2e8bc55b20c2d61648-002 | Negative: Customer attempts to view another customer's support ticket | Requirement version 2

Linked criteria: AC-002

Preconditions

The user is an authenticated customer.

A support ticket exists and is owned by a different customer.

Test Steps

The authenticated customer requests to view the support ticket owned by another customer.

Expected Result

The system returns access denied without exposing any ticket content.

Reviewer Notes

[DEMO] Synthetic SQA review of this saved source version; AI suggestions still require stakeholder confirmation.

REQ-5 - Versioned traceability and Manual execution

Project current | Current content version 2 | [DEMO] Verified owned-ticket access

SQA review: Approved | Authoring state: Approved | Reviewed version: 2

Recorded criterion links do not prove complete coverage. Only Pass is passed; Not Run and Blocked are not passed. Historical cases/results do not validate a new requirement version.

Requirement version 2 (current)

Recorded 2026-10-25T18:39:33.421Z | Actor 2 | saved version

An authenticated customer can view the subject and description of a support ticket they own. Requests for another customer ticket return access denied without ticket content.

AC-001: An authenticated customer requesting to view a support ticket they own must receive the subject and description of that ticket.

AC-002: An authenticated customer requesting to view a support ticket owned by another customer must receive an access denied response without any ticket content.

Requirement version 1 (historical)

Recorded 2026-10-25T18:39:23.993Z | Actor 2 | saved version

An authenticated customer can view the subject and description of a support ticket they own. Requests for another customer ticket return access denied without ticket content.

TC-5: Customer views owned support ticket

Requirement version 2 | Case revision 1 | Draft | active | Unspecified | Priority High

Criterion links: AC-001

Preconditions: The user is an authenticated customer.; A support ticket exists and is owned by the authenticated customer.

Test data:

1. The authenticated customer requests to view their owned support ticket.

Expected: The system returns the subject and description of the requested support ticket.

Clarification: None recorded

TC-6: Customer attempts to view another customer's support ticket

Requirement version 2 | Case revision 1 | Draft | active | Unspecified | Priority High

Criterion links: AC-002

Preconditions: The user is an authenticated customer.; A support ticket exists and is owned by a different customer.

Test data:

1. The authenticated customer requests to view the support ticket owned by another customer.

Expected: The system returns access denied without exposing any ticket content.

Clarification: None recorded

Case snapshot #5 - TC-5 revision 1

Requirement version 2 | Customer views owned support ticket | Criteria: AC-001

Preconditions: The user is an authenticated customer.; A support ticket exists and is owned by the authenticated customer. | Test data:

1. The authenticated customer requests to view their owned support ticket.

Expected: The system returns the subject and description of the requested support ticket.

Case snapshot #6 - TC-6 revision 1

Requirement version 2 | Customer attempts to view another customer's support ticket | Criteria: AC-002

Preconditions: The user is an authenticated customer.; A support ticket exists and is owned by a different customer. | Test data:

1. The authenticated customer requests to view the support ticket owned by another customer.

Expected: The system returns access denied without exposing any ticket content.
